

Sinag Catering Web App – System Revisions Checklist

1. Package Selection Screen
 - Action: Add a dedicated "AI Package Recommendation" tab/selector above or alongside the package selection card grid (matching the desktop view design).
 - Behavior: Gives users a clear, visible option to switch between viewing standard packages or generating an AI-guided package match.
2. Event Customization Screen
 - Task 1 (UI Cleanup): Remove the inline AI Recommendation box/widget from the "Customize Your Event" step. Standard package customization should remain clean and manual without mid-page AI widgets.
 - Task 2 (Flow Restructure): Move the AI recommendation logic to a separate, dedicated page/step. This page should take user inputs (Budget in PHP, Pax / Guest Count, Entertainment requirements) and generate recommended package matches.
 - Task 3 (Bug Fix - Math Logic): Audit and fix the price calculation logic in the Estimate Summary sidebar (ensure total estimation math, add-ons, and required 50% downpayment accurately sum up based on guest count and inclusions).
3. Calendar & Event Date Picker
 - Bug Fix: Calendar Date Styling & Alignment
 - Issue: Dates blocked via the Admin Panel (e.g., October 1) render on the calendar, but the font color and text alignment do not visually align with the "Blocked" legend badge styling.
 - Action: Update the CSS state for blocked dates so text position, color, and background highlighting strictly follow the Blocked legend design token.
4. Event Details & Payment Integration
 - Feature: Payment Method Section
 - Action: Add a dedicated Payment Method Selection section inside the "Your Details" step.
 - Requirements: Include support/display for QR Ph / GCash payment options alongside the downpayment instructions summary.
5. Category Selection & Dynamic Photo Preview
 - Task 1 (Category Standardization): Update the Event Category dropdown options to strictly the following 4 options:
 - Kids Birthday
 - Debut
 - Wedding
 - Others (Please Specify)
 - Task 2 (Dynamic Image Rendering): Implement a dynamic image gallery container next to the form fields. When a user selects a category, display sample showcase photos specific to that event category (pulling from our stored asset library).

6. Client Portal Authentication / Login Form

- Feature: Password Input & Visibility Toggle
- Action: Add a Password input field (type="password") with standard asterisk/dot masking by default. Include an interactive eye-icon button to toggle password visibility (show/hide text), and enforce password validation on submission.

7. Sinag AI Concierge Chatbot Widget

- Task: Backend API Connection & Flow Verification
- Action: Connect the floating Sinag AI Concierge drawer input and quick-suggestion pills (e.g., "Recommend package", "How much is Full Blast?") to the active backend AI API endpoint, ensuring live dynamic responses rather than hardcoded static text.

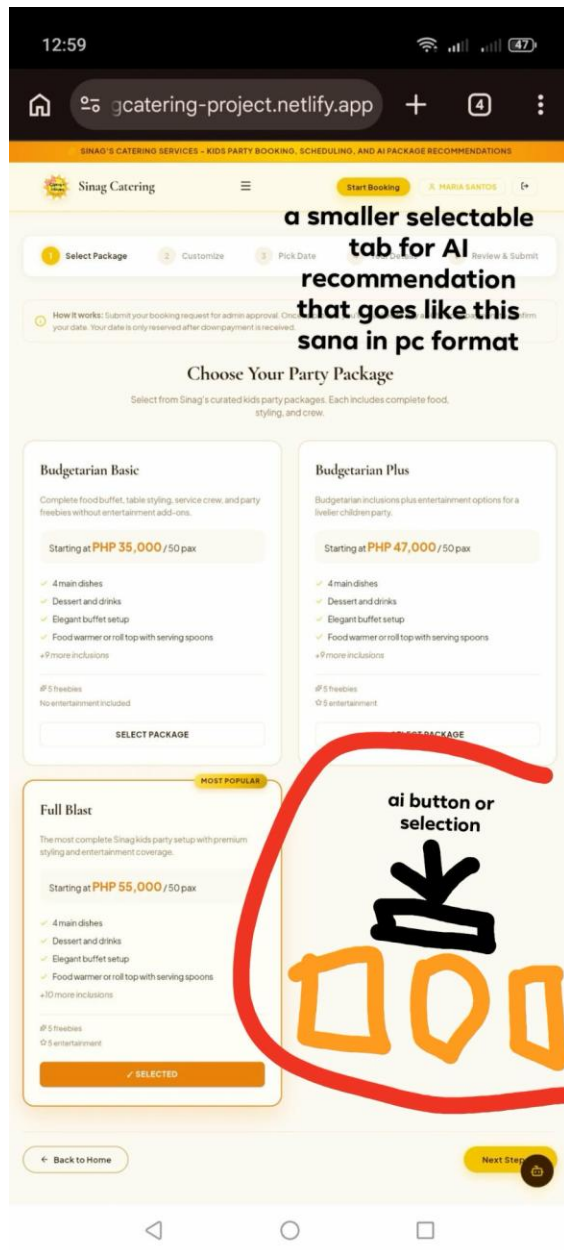

8. Admin Panel – Downpayment Verification & Approval Modal

- Feature: Manual Payment Verification Workflow
- Action: Rename the action button from "APPROVE & REQUEST DOWNPAYMENT" to "VERIFY DOWNPAYMENT & APPROVE BOOKING".
- Logic: Since payment/QR Ph instructions are already completed on the client side (Step 4), this button should directly confirm that the Admin checked her phone/bank app and verified the incoming funds. Clicking it updates the booking status from "pending verification" to "Confirmed / Downpayment Verified".
- Enhancement: Display the client's GCash Reference Number or uploaded receipt inside this modal for quick cross-checking against the Admin's phone notifications.

9. **Authentication & Notifications (SMS / Email Flow)**

- **Feature:** Real-Time SMS (Semaphore) & Email Triggers
- **Action:** Connect and verify the backend integration for Semaphore SMS (OTP verification during client registration/password reset) and transactional notifications (booking submission, payment verification alerts).
- **Goal:** Ensure actual SMS/Email payloads trigger and deliver during key user events rather than remaining in a static or UI-only state for the demo

SINAG'S CATERING SERVICES - KIDS PARTY BOOKING, SCHEDULING, AND AI PACKAGE RECOMMENDATIONS

Sinag Catering Start Booking MARIA SANTOS

1 Select Package 2 Customize 3 Pick Date 4 Your Details 5 Review & Submit

How it works: Submit your booking request for admin approval. Once approved, you'll be asked to pay a 50% downpayment to confirm your date. Your date is only reserved after downpayment is received.

Customize Your Event

Adjust guest count, add extras, and let AI recommend the best fit for your budget.

Full Blast Kids Party Package with Freebies

PHP 60,000 /70 pax

The most complete Sinag kids party setup with premium styling and entertainment coverage

AI Recommendation

Recommended: **Budgetarian Plus** at PHP 52,000. This may fit the pax, budget, and entertainment needs of your event.

BUDGET

60000

☒ Needs entertainment

APPLY AI CHOICE

Estimate Summary

Package Tier (70 pax) PHP 60,000

Food Buffer +10 pax included

Total Estimated Cost **PHP 60,000**

Required 50% Downpayment: **PHP 30,000**

Package valid only after admin approval

remove this from here

add a different page to cater to the ai recommendation and base it on user inputs: budget or php and pax...

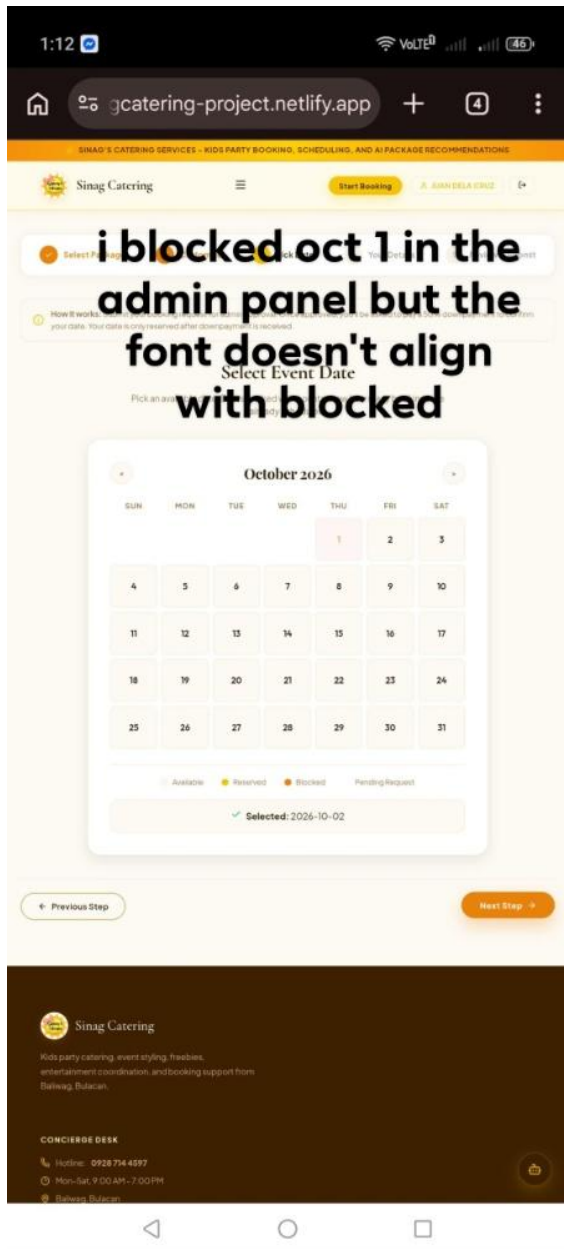

pag typical package lang, remain as is lang but remove the ai widget and i hope the math is fixed in the estimation

OUTLINE: 70 pax + 10 pax buffer
